**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The applicant is required to define **Im** in the formula of  $Im(kL)$  and identify each element of the formula in the claim.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1 and 3-7 are rejected under 35 U.S.C. 102(a) as being anticipated by Yang et al. (Enhanced Performance of Uncooled Strongly-Gain-Coupled MQW DFB Lasers in 10Gb/s Link Applications) paper presented at European Conference for Optical Communications, Fall 2001.

With respect to claim 1, Yang disclose a directly modulated, distributed feedback gain- coupled laser having an output beam responsive to the application of an input biasing current, comprising an active region to which a grating is applied such that gain-coupling defined by  $\text{Im}(kL)$  is at least 0.06 (abstract and Fig.4).

With respect to claim 3, Yang disclose the gain coupling is sufficient to provide, in an environment in which the laser is to operate, a significant reduction in the received power penalty from a laser having less gain coupling (abstract and entire paper).

With respect to claim 5, Yang disclose the environment in which the laser is to operate, the level of gain coupling is sufficient to provide a 3dB reduction in the received power penalty from a laser having no gain coupling (abstract and entire paper).

With respect to claim 6, Yang disclose the input biasing current is modulated at a frequency which approaches the relaxation oscillation frequency of the laser output (Table 1 and entire document).

With respect to claim 7, Yang disclose the environment is uncooled (abstract).

*Allowable Subject Matter*

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
